

A movie title card for "Candyman: Echoes of Cabrini". The background is a night scene of a row of brick tenement houses in a city, with a city skyline visible in the distance. The title "CANDYMAN" is written in large, golden, serif capital letters, and "ECHOES OF CABRINI" is written in smaller, golden, serif capital letters below it. The text is overlaid on a dark, hexagonal pattern. Small, blue, insect-like creatures are flying around the text.

CANDYMAN

ECHOES OF CABRINI

Say his name... if you dare.

Candyman: Echoes of Cabrini is a **6-8 hour first-person psychological horror experience** where players uncover buried family secrets tied to the Candyman mythos.

Explore shifting realities, wield mirrors as tools and traps, and survive the haunting consequences of uncovering the truth.

Remember Where You Came From

You play as a young woman uncovering the truth about her family's rise from the ruins of Cabrini Green.

Her father's secret deal with developers unleashed tragedy decades ago. Now, as the myth of Candyman resurfaces, she discovers that her family's bloodline may be the next offering.

The deeper she digs, the thinner the veil becomes — until the mirror world swallows her whole.

A Haunted Descent into Memory and Myth

Explore two worlds: **the suburban present** and **the decayed echoes of Cabrini Green**.

Mirrors serve as portals between realities — tools for escape, or for summoning.

The **AI Director** tailors haunt intensity and events dynamically.

Every choice, discovery, and reflection shapes your ending — and your sanity.

Gameplay Loop

Explore:

Navigate grounded, realistic environments in immersive first-person perspective. Search homes, libraries, hospitals, and the haunting echoes of Cabrini for evidence of the truth behind your family's past.

Investigate:

Use your smartphone's camera to reveal hidden layers of reality, record supernatural evidence, and uncover fragmented memories that alter the world around you.

Reflect:

Interact with mirrors scattered through the world — portals that serve as both tools and threats. Mirrors allow traversal between “real” and “otherworld” versions of each location, but frequent use risks summoning the Candyman himself.

Survive:

Evade, outthink, or fend off manifestations of the Candyman's wrath. Encounters blend stealth, limited combat, and psychological pressure. Every noise, reflection, and decision influences the world's hostility, keeping tension high.

Escalate:

Push deeper into the nightmare — uncovering new truths about your family's past and the myth's reality.

Gameplay Systems That Drive Fear!

Mirror Mechanics – Use mirrors to traverse realities or trap entities. Overuse risks summoning Candyman.

AI Director System – Dynamically generates haunt events, escalating based on unseen “belief” and fear metrics.

Environmental Storytelling – Real-world exploration mixed with “otherworld” reflections of guilt and memory.

Stealth & Survival – Limited combat, improvised tools, light management, and player choice determine survival.

Dynamic Sanity System – Reality distorts as the player uncovers truths, impacting visuals and soundscape.

Visual Identity

Urban Gothic Meets Modern Suburbia

Aesthetic blend of **urban decay** and **domestic horror**.

Color palette: honey-gold, deep black, washed-out suburban tones.

Cinematic lighting inspired by *Candyman* (1992) and *The Neon Demon*.

High-fidelity assets powered by Unreal Engine 5.6
Lumen & Nanite.

The Mirror

Realm

Why Candyman, and Why Now?

- *Candyman* is one of the most enduring horror icons of the modern era – blending social commentary, psychological terror, and visceral dread.
- Horror gaming has surged 200% in engagement since 2020 (Steam / console data).
- Demand for **intelligent, narrative-driven horror** is at an all-time high (*Alan Wake 2*, *Amnesia: The Bunker*, *Silent Hill 2 Remake*).
- Licensed IP horror is booming (*Texas Chainsaw Massacre*, *Killer Klowns*, *Friday the 13th*, *Hellraiser*).
- Estimated Budget: **\$500K–\$600K**
- Target Platforms: PC / PS5 / Xbox Series
- Expected Development Time: **24 months**

Development Timeline

Months 1 - 3: Narrative/script, game systems and AI built.

Months 4 - 6: Feature complete, polished vertical slice.

Months 7 - 18: Full production. All remaining levels and assets added.

Months 19 - 24: Q/A Testing, remaining polish, marketing.

Months 25 - And Beyond: Bug fixes, additional content.

Meet Nightwolf Games

Nightwolf Games is an independent studio led by **Nacho Rodriguez (CEO)** and **Pete Wicher (Co-Director, Narrative / Audio)** – a team of passionate horror creators combining film-quality sound design, narrative depth, and next-gen Unreal tech.

Our mission: to craft intelligent, atmospheric horror games that blend emotional storytelling with raw, interactive tension.

Core Team:

- **Nacho Rodriguez** – CEO, Director, Lead Programmer
- **Pete Wicher** – Co-Director, Narrative / Sound Design
- **Jose Uceta** - Programming, 3D Art
- **Jaime Castells** - Level Design, 3D Art
